SUMMARY

SUMMARY
Backend-focused Software Developer with a strong foundation in Laravel/PHP, working across modern stacks (Laravel, React) and legacy enterprise systems (Spring MVC, Oracle) still in active use. Experienced in designing backend systems with a focus on Clean Architecture. Hands-on experience building an identity verification pipeline (Google Vision) and a Stripe-based wallet payment system. Currently expanding into scalable SaaS architecture design workflow automation.

PROFESSIONAL EXPERIENCE

Assistant Software Engineer - Intern 06/2026 – 08/2026
Ministry of Public Works and Housing, Syria

- Audited and resolved 11 prioritized security vulnerabilities in a legacy Spring application, closing access-control gaps, eliminating insecure GET-based delete operations, and replacing plaintext password storage with proper encoding.
- Implemented a 13-step performance-optimization initiative — including N+1 query resolution, connection pooling, caching, log cleanup, and JVM/Tomcat tuning — improving response times under load; database-level optimizations (indexing) were deferred due to local development constraints.
- Migrated legacy JSP-based interfaces to modern HTML/CSS/JS front-ends with JSON-based data exchange, replacing server-rendered views.

PROJECTS

Smart Platform for News (Present Project, 2026)
Graduation Project — Laravel, Flutter, React

- Built the Laravel backend powering a full-stack platform for managing events, courses, and exhibitions (Flutter mobile app and React dashboards developed by teammates), with role-based access for users, companies, and admins.
- Developed an automated identity verification pipeline using the Google Vision API and a custom weighted scoring algorithm, processed asynchronously through Laravel Queues.
- Implemented a Stripe-based wallet payment system and RESTful APIs following the Service-Repository pattern across all modules.

Events Management Platform 08/2026 – Present
Personal Project — Laravel, React

- Architected the end-to-end system design for a multi-role, nationwide events management platform, producing a complete use-case model, 30+ functional requirements, and a role-based access model built on the Principle of Least Privilege.
- Designed a concurrency-safe ticket reservation mechanism to prevent overselling, combining atomic conditional updates with a dual-layer expiration system (delayed queue jobs backed by database-level fallback) and configurable hold durations per payment method.
- Designed a multi-provider verification pipeline (Gemini API → Google Vision API → manual review) using a Chain-of-Responsibility failover architecture with a weighted confidence-scoring model to route only ambiguous cases to human review.

Maktabatna — Family Library App
Personal Project — React Native, Laravel, PostgreSQL

- Developed an Android app cataloging a **~6,000-book** family library across **2 rooms, 10 bookcases and 37 shelves**, with a 3D view showing each book's exact location, writing **~11K lines of code and 18 screens** at **$0 running cost**.
- Designed an **offline-first sync** system connecting family phones to a home server across **18 tables**, merging concurrent edits to the same book **field by field** so that no one's changes are lost.
- Reduced adding a book from **10 manual fields to 1 spoken sentence** that auto-fills every field, and added QR shelf labels that set a book's location in **a single scan**.

LANGUAGES

Arabic — Native/Bilingual

English — Conversational

SKILLS

Core Strengths:

- **Backend Development:** PHP, Laravel, RESTful APIs, Webhook
- **Databases:** SQL, MYSQL, Oracle
- **Legacy Enterprise Stack:** Spring MVC (maintenance & optimization of existing systems)
- **Version Control:** Git, GitHub, GitLab
- **Containerization:** Docker, docker compose

Familiar With:

- C#
- MAUI
- **Frontend Development:** HTML5, CSS3, Java Script, Bootstrap, React.js
- Basic Networking Concepts

Workflow Automation:

- n8n

Architecture & Design Patterns:

- MVC Architecture
- Repository, Strategy, Service and Adapter Pattern
- MVVM Architecture

Professional:

- Team Collaboration and communication
- Problem-solving and algorithmic thinking (competitive programming, 1+ years)

EDUCATION

Damascus University 2023 – Present
Associate Software Engineering
